

Natural Resources & Infrastructure Fund

QUARTERLY ACTIVE ESSENTIALS FUND REVIEW | All information is as of 9/30/25 unless otherwise indicated.

3Q'25

ICBMX: INSTITUTIONAL CLASS

GENERAL FUND OVERVIEW

- » The ICON Natural Resources & Infrastructure Fund is an actively managed product that invests across all market capitalizations, primarily focused on three sectors: Energy, Materials, and Industrials.
- » The Fund seeks long-term capital appreciation by selecting the companies and industries that our value-based investment methodology identifies as potential market leaders.
- » ICON calculates the intrinsic value of for companies, analyzing historic earnings, future earnings growth, market risk, and opportunity cost. We then assess company management quality, all in the attempt to identify and actively tilt the Fund to our favored industries with tactical rotations through valuations.

Quarterly Review

With continued uncertainty in the market, the sector ICON refers to as the Natural Resources & Infrastructure saw extended volatility, with different segments of the market taking turns leading day-to-day. Driven primarily by Fed guessing and continued trade tensions with China, investors continued to chase commodities and precious metals.

While ICON doesn't value or directly invest in commodities, we do hold companies involved in the mining, extraction, and refining of those commodities. With holdings in Silver and Gold within the Materials sleeve, ICBMX has been participating.

However, as we move open the fourth quarter, ICON remains optimistic and believes a market theme driven by small-cap, dividend-paying stocks will continue. Our value-based methodology is still finding value in those companies, specifically in the economically sensitive Industrials and Materials sectors. Being heavily weighted toward those sectors, as well as reduced exposure to Energy, reflects our belief that there's value to be gained and that the market can move higher to finish 2025.

Top Contributing Industries

- Oil & Gas Equipment & Services
- Industrial Machinery
- Gold
- Aluminum
- Oil & Gas Refining & Marketing

Sector Review

The Natural Resources segment of the market forms the backbone of growth in the economy. It is comprised primarily of companies in the Energy and Materials sectors, covering a wide-range of commodity-related industries, including chemical manufacturers, construction materials, glass, paper, forest products, metals, minerals and mining, and companies heavily tied to oil and natural gas. The Infrastructure element includes industries in the Industrial sector including transportation and construction industries.

Fund Review

Over the long-term (15-year period), as of 9/30/25, the ICON Natural Resources & Infrastructure Fund has demonstrated considerable overall growth while also adding significant alpha, vs. the category average (4.88%). The Fund has provided a relatively low downside capture against its category and, as of 9/30/25, the Fund ranks in the top 28% or better over the 3, 5, and 10-year periods in the Morningstar Natural Resources category.

The Fund's ability to invest across a variety of sector-related industries and its low correlation to the benchmark, or Active Share, has directly contributed to the Fund's positive risk-adjusted returns. As active managers ICON believes funds with high Active Share have the potential to outperform their benchmark indexes. By building a fund that combines low correlation with actively managed sector and industry tilts, we also believe we can add value as an investment manager.

**** Not annualized. The data quoted represents past performance, which is no guarantee of future results.** *The S&P 1500 Blended Composite Benchmark, Natural Resources (Energy, Materials, Industrials), is a simple composite (holdings based) based on the market values of the components and is created by combining the relative weight-adjusted net market value of each composite component. The Energy, Materials, and Industrials sectors from the S&P 1500 are market value weighted daily.

Investment return and principal value will fluctuate and shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the data quoted. Please call 1-800-828-4881 or visit www.ICONAdvisers.com for performance results current to the most recent month end. Returns assume the reinvestment of dividends and capital gain distributions and reflect applicable fees and expenses. Performance without maximum sales charge does not include front-end or contingent deferred sales charges. Performance is for the Fund's Institutional Class shares. Performance for the Fund's other share classes will vary due to differences in charges and expenses.

Investing in securities involves inherent risks, including the risk that you can lose the value of your investment. There is no assurance that the investment process will consistently lead to successful results. An investment concentrated in sectors and industries may involve greater risk and volatility than a more diversified investment. There are risks associated with small- and mid-cap investing such as less liquidity, limited product lines, and small market share. An actively managed investment product does not guarantee better returns or performance than any other kind of investment. Other principal investing risks may include non-diversified portfolio risk, Developing and Emerging Market risk, ETF risk, Global Natural Resources risk, Globalization risk, Regional Focus risk, or Quantitative Model risk.

Opinions and forecasts regarding sectors, industries, companies, countries and/or themes, and portfolio composition and holdings, are all subject to change at any time, based on market and other conditions, and should not be construed as a recommendation of any specific security, industry, or sector.

ICON's value-based investing model is an analytical, quantitative approach to investing that employs various factors, including projected earnings growth estimates, in an effort to determine whether securities are over- or underpriced relative to ICON's estimates of their intrinsic value. ICON's value approach involves forward-looking statements and assumptions based on judgments and projections that are not guarantees of future results. Value investing involves risks and uncertainties and does not guarantee better performance or lower costs than other investment methodologies.

The S&P North American Natural Resources Index is a benchmark that tracks the performance of publicly traded large and mid-cap US and Canadian companies in the natural resources and commodities businesses, specifically within the energy, metals & mining, and agriculture sub-industries. The Standard and Poor's (S&P) 1500 Energy Index is an unmanaged capitalization-weighted index comprising companies in the Energy sector as determined by S&P. The Standard and Poor's (S&P) 1500 Materials Index is an unmanaged capitalization-weighted index comprising companies in the Materials sector as determined by S&P. The Standard and Poor's (S&P) 1500 Industrials Index is an unmanaged capitalization-weighted index comprising companies in the Industrials sector as determined by S&P. Total returns for the S&P 1500 Industrials Index include the reinvestment of dividends and capital gain distributions beginning on January 1, 2002. Index returns with reinvested dividends and distributions are unavailable prior to that date. The Morningstar Natural Resources category average includes natural-resources portfolios that focus on commodity-based industries such as energy, chemicals, minerals, and forest products in the United States or outside of the United States. Some portfolios invest across this spectrum to offer broad natural-resources exposure. Others concentrate heavily or even exclusively in specific industries. Portfolios that concentrate primarily in energy-related industries are part of the equity energy category. The Fund's composition may differ significantly from the indexes. Individuals cannot invest directly in an index.

The alpha coefficient is a measure of risk-adjusted return relative to a specific benchmark. This number represents the difference between the portfolio's actual performance and the performance anticipated in light of the portfolio's risk posture and the market's behavior as represented by the benchmark. A positive alpha indicates that the manager has been successful at security selection and has produced a rate of return which is more than commensurate with the portfolio's risk posture as it relates to the underlying benchmark. The beta coefficient is a measure of a portfolio's volatility relative to the market. An index relevant to the portfolio is used as the proxy for the market, and is considered to have a .00 beta. Therefore, if the portfolio has a beta of .50, it has historically been 50% more volatile than the market for the periods shown. The Upside Capture percentage explains how well a portfolio performs in monthly periods where the benchmark returns are greater than 0.00%. For example, if the benchmark's upside capture is 00% and the portfolio's is 7%, then when the benchmark is up 0%, the portfolio would be up 7%. The Downside Capture percentage explains how well a portfolio performs in monthly periods where the benchmark returns are less than 0.00%. For example, if the benchmark's downside capture is 00% and the portfolio's is 96%, then when the benchmark is down 0%, the portfolio would be down 9.6%.

Active Share is a measure of the percentage of stock holdings in a manager's portfolio that differs from the benchmark index.

¹ As of 9/30/25 the ICON Natural Resources and Infrastructure Fund, Institutional Class, was rated against 113, 105, and 89 U.S. Natural Resources funds over the last three-, five-, and ten-year periods respectively. The Fund received an overall Morningstar Rating of 5 stars, with 4 stars for the three- and five-year periods, and 5 stars for the ten-year period. Morningstar Rating is for the Institutional Class shares only; other classes may have different performance characteristics.

The Morningstar information contained herein is © 2025 Morningstar, Inc. All rights reserved. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information.

Morningstar Rating is for the Institutional Class shares only; other classes may have different performance characteristics. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total return, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total return. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take into account the effects of sales charges and loads.
