Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The example assumes you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class A	\$719	\$1,053	\$1,411	\$2,412
Class C	\$328	\$ 715	\$1,229	\$2,637
Class S	\$112	\$ 350	\$ 606	\$1,339

You would pay the following expenses if you did not redeem your Class C shares:

	1 Year	3 Years	5 Years	10 Years
Class C	\$228	\$715	\$1,229	\$2,637

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 15% of the average value of the portfolio.

Principal Investment Strategies

The Fund uses a quantitative methodology to identify securities ICON believes are underpriced relative to value. Normally the Fund will invest at least 80% of its net assets, plus any borrowings for investment purposes, in equity securities traded in the U.S. This strategy may not be changed unless Fund shareholders are given at least 60 days’ prior notice.

ICON believes that equity markets go through themes over time, simply stated, stocks in industries that were market leaders at one time tend to become overpriced relative to intrinsic value, and stocks in industries that were not in favor tend to drop below intrinsic value. The Fund will sell industries ICON believes are overpriced and buy industries we believe are underpriced. The Fund may invest up to 25% of its assets in a single industry. ICON’s combination of industry rotation and bottom-up valuation distinguishes us from other investment managers. Equity securities in which the Fund may invest include common stocks and preferred stocks of companies of any market capitalization.

Principal Investment Risks

Like all investments in securities, you risk losing money by investing in the Fund. The main risks of investing in this Fund are:

- **Industry, Focus and Concentration Risk.** Companies that have similar lines of business are grouped together in broad categories called industries. Certain industries are grouped together in broad categories called sectors. The Fund may overweight industries within various sectors and may invest up to 25% of the Fund’s total assets in a single industry. The fact that the Fund may overweight a specific industry or industries may cause the Fund’s performance to be more susceptible to political, economic, business or other developments that affect those industries or sectors. This overweighting means the Fund may be less diverse and more volatile than its benchmark. Moreover, the Fund generally maintains a portfolio of approximately 30 to 40 securities. Holding a smaller, more concentrated portfolio rather than a larger, more diversified portfolio may likewise cause the Fund to be more volatile and susceptible to political, economic,

business and other developments, all of which could adversely affect performance.

- **Small and Mid-Size Company Risk.** The Fund may invest in small or mid-size companies which in turn may also involve greater risk of loss and price fluctuation. The trading markets for securities of small-cap issuers may be less liquid and more volatile than securities of larger companies.
